Abstract

This is the first government since Independence that came to power on the platform of economic growth and governance. While the "big bang" reforms are stuck, there has been a huge focus on speed of decision making, corruption free governance and timely implementation. Some of the reforms that did get through are potential game changers in the long run - the most promising of them being reform of regulations relating to start ups. The lack of focus on bureaucratic overhaul, however, limits the speed of execution. There are enough seeds that have been planted that will transform the Indian economy in the coming years.
